LUX ELEMENTS®- LAVADO-FLOAT L

New washstand in floating design with linear drainage

From January 2018 LUX ELEMENTS is extending the washstand product group by the new LAVADO-FLOAT L floating model with sloping basin and height-adjustable linear drain technology including drain adaptor for the siphon.

The reversible cover for the drain channel is made of brushed stainless steel and offers two design possibilities: one side shows the brushed stainless steel surface, the other can be tiled to match the entire washstand. A special bonus with the drain adaptor that comes with it is the clip system, which ensures fast, simple and secure connection to the 1¼" siphon.

The LAVADO product group also offers four tried-and-tested washstand models with point drainage in the middle:
Three models possess a milled recess for the washbasin: oval, rectangular or cylindrical. The fourth model is smooth and thus suitable for conventional fitted or top-mounted basins.
The washstand panels made of hard foam support material are fastened invisibly to the wall at any desired height with two stainless steel brackets: this is an important advantage in barrier-free bathrooms where it must be possible for a wheelchair to fit underneath.

The width of the washstand models of 1,170 mm is optimally coordinated

with common tile sizes. The panels can be shortened at both sides in order, for example, to adapt them to a niche.
Plastic reinforcements integrated into the washstand create a stable substrate for the fixing of the sanitary fittings and increase the overall stability of the structure.

Following the installation the surface is finished with tiles, natural stone, mosaic or plaster. This enables bathroom planners and users to implement their own design ideas and wishes, so that ultimately each LAVADO-FLOAT washstand is unique.
